Spain, but the Araucanian Indians kept control of the south until the mid 19th c. In 1818, thanks to the liberating army which San Martín brought over the Andes from Argentina the previous year, Chile won independence from Spain after a ... led by Bernardo O'Higgins. The first constitution was introduced in 1833. Conservative and liberal governments were followed after 1891 by a succession of dictator presidents. Chile fought wars against Peru and Bolivia (1836–9 and 1879–84), and against Spain (1866). She settled her boundary disputes with Argentina (1899–1902) and with Peru (1929). A popular front government was in power (1938–58), after which Jorge Alessandri followed (1958–64) a pro-U.S. policy which kept the economy tied to copper. In the 1964 elections, remarkable for the absence of any rightist party, Eduardo Frei, leader of the moderate leftist Christian Democrats, defeated Salvador Allende, leader of the far left Popular Action Front (FRAP). Impressive gains (1969) by the conservative National Party, though partly the result of recent natural disasters, led Frei to decide (1969) on the widely popular move to nationalize, with compensation, the Anaconda Co., the world's biggest producer of copper. Constitutionally barred from a second consecutive term in office, Frei was replaced as leader of the Christian Democrats by Radomiro Tomic, whose platform in the 1970 elections was, if anything, to the left of Allende's. In the elections Allende narrowly led the conservative Alessandri, but his lack of a majority required Congress to decide the winner. Since Tomic, and ultimately even Alessandri, gave their support to Allende, he was duly endorsed, to become the first Marxist ever to win a free federal election. He nationalized all other U.S. copper firms and all private banks. He died during a military coup financed by the U.S. CIA and was replaced by a junta headed by Gen. Augusto Pinochet Ugarto (1974). A 1980 plebiscite confirmed Pinochet in office until 1989 and a new constitution provided for a bicameral legislature to be installed in 1989. The Pinochet government restored many banks and industries to private ownership. An economic recession (1982–3) led to increased political opposition, which continued despite slight improvement in the economy (1984)

and 100 fen. HISTORY Early Chinese history [illegible] emperor, Son of Heaven, and the origin and development of Chinese society along the Yellow River. The historic period began with the Chou dynasty (1122–221 B.C.), the third of 22 dynasties. It was the age of great Chinese philosophy, of Confucianism, Taoism, Mohism, Legalism. The Ch'ins (221–209 B.C.) created an empire based on Legalist principles. The Hans (206 B.C.–220 A.D.) ended Chinese isolation, created stability, and attempted to control their barbarian neighbors. Buddhism was introduced (1st c. A.D.) and dominated the period of the Three Kingdoms (220–589). The empire was reunited and considerably expanded under the Suis (590–618) and consolidated by the T'angs (618–906). After another period of fragmentation (907–960), peace was restored under the Sungs (960–1279) and the arts flourished. The Mongol invasion (1210) under Genghis Khan established the Yuan dynasty (1279–1368). By 1360 revolt was widespread. Mongol oppression provoked a new isolation policy under the Mings (1368–1644), whose power was weakened by corruption and foreign infiltration. The early Manchu rulers reestablished the Chinese Empire under the Ch'ing dynasty (1644–1912) (*TZU HSU). Government ineptitude in the 18th c. and the increasing efforts of foreign powers to exploit trade relations led to six major clashes, notably the Taiping rebellion (1850–65), the Opium War (1839–42), the Arrow War (1856–60), and the 1st Sino-Japanese War (1894–95), and the development of secret antiforeign societies (e.g. Triad, Boxer). By 1900 China was divided into spheres of influence, the European powers claiming special rights. After many attempts at reform, the dynasty was overthrown (1911) and Sun Yat-sen was installed as provisional president of the republic. Yuan Shih-kai, an imperial general, was appointed president (1912), but his monarchist policies led to anarchy and an increase in the power of the warlords after his death (1916). The Kuomintang and the Nationalist government formed under Chiang Kai-shek (1926) restored order and the Chinese Communists went to Yenan. Japan invaded Manchuria (1931). The 2nd Sino-Japanese war (1937–45) temporarily stopped the conflict between the Nationalists and the Communists under Mao Tse-tung. At the end of the 2nd world war civil war was resumed until Chiang Kai-shek was expelled to Taiwan (1949). A people's republic was formed (Sept. 21, 1949) and economic rehabilitation progressed rapidly under the five-year plan of 1953–7 and 1959–62. In 1966 Mao Tse-tung launched the Cultural Revolution. Border disputes arose with India (1964–6) and with the U.S.S.R. (1969). The first Chinese earth satellite was launched (Apr. 1970). The People's Republic replaced (Oct. 1971) Taiwan in the United Nations. Soon after Mao's death (1976) the moderate leader Teng Hsiao-p'ing took control and ties with the U.S. were strengthened, diplomatic relations were restored (1979). The excesses of the Cultural Revolution were officially condemned and a campaign of party reform began (1984). An agreement was reached with Britain on the future of Hong Kong (1984), and tensions eased with the U.S.S.R. in the early 1980s.

Chinese language the most important member of the Indo-Chinese group, spoken by over 600 million people in China, Mongolia and S.E. Asia. Dialects: Northern (official), Southern and Southwestern Mandarin (together spoken by 80% of the mainland population), Cantonese, Kan-Hakka (Kiangsi), Amoy-Swatow, Foochow, Wu (Kiangsu-Chekiang), Hsiang (Hunan). It has had a great influence on other Eastern languages, comparable to that of Greek and Latin in the West. It is a tone language and is monosyllabic, with no grammatical inflection. The standard dialect is that of Peking. The written language has remained largely unchanged for over 1,000 years and is common to all the dialects. It consists of characters representing a combination of sounds and ideas, and is written vertically. A roman script was introduced by government order (1958) for the transcription of Chinese characters in books and newspapers. A Chinese script, simplified in its form and with fewer characters, and written horizontally from left to right, has also been introduced. Both systems are in use, alongside the older form.

Chris·ti·an·i·ty (krist∫ɪ:ænɪti:) *n* the religion of those who accept Jesus Christ as God incarnate, are guided by the Holy Spirit, and participate in the fellowship of the Christian Church the state of being a Christian [fr L. *Christianitas*]

—Christianity came into being (c. 30 A D) when the Apostles received the power of the Holy Spirit to preach the resurrection and gospel of Christ Jesus had placed the Jewish idea of the Kingdom of God at the center of his teaching, but gave the idea a new spiritual, universal meaning He taught that God is present wherever individuals enter into the relationship of love which God is seeking to establish with them This relationship was established by Jesus at the cost of his crucifixion by men who rejected his claims. The relationship of love transcends time and space: the disciples of Jesus felt a continuing relationship with him which, though broken by his crucifixion, was restored by his resurrection. The most influential of the Apostles was Paul, the founder of Christian theology, whose missionary journeys ensured that Christianity would not be simply another Jewish sect. Between two periods of persecution in the latter half of the 1st and 3rd cc., Christianity established itself throughout the Roman Empire as a highly organized hierarchy separate from the State and predominantly Gentile. By the 2nd c bishops, presbyters and deacons had emerged In the 3rd c diocesan bishops replaced congregational bishops, and the jurisdiction of the bishops of Rome, Constantinople, Antioch, Alexandria and Jerusalem (the patriarchs) extended beyond the diocese In 313 Constantine accorded to Christianity the rights and toleration previously enjoyed by paganism, and in 380 Theodosius established it as the one and only State religion [illegible] controversy and heresy In the 2nd c the early Church safeguarded its institutional orthodoxy against the perils of Arianism, Montanism and [illegible] convoking synods and ecumenical councils, formulating creeds, establishing the canon of the [illegible]

Church of England the established Church in England. It was created as a national institution by the Act of Supremacy (1534), which replaced the pope's authority by that of the king as 'the only supreme head on earth of the Church of England'. The change was occasioned by Henry VIII's [illegible] divorce [illegible] of Aragon, and by his financial difficulties, which were relieved by Thomas Cromwell's suppression of the monasteries (1535–6). Few doctrinal changes were made until the reign (1547–53) of Edward VI, when the Books of Common Prayer of 1549 and 1552 showed increasingly the influence of the Reformation. After the brief return to Roman Catholicism in the reign (1553–8) of Mary, the Church of England was restored under Elizabeth I. Its doctrine, set out in the 39 Articles (1571), met growing opposition from the Puritans, whose views were rejected at the Hampton Court Conference (1604). The Authorized Version of the Bible appeared (1611). The attempts of Laud to increase the Church's ceremonial further alienated the Puritans. The Civil War ensued (1642–52), and the Long Parliament established Presbyterianism (1646). At the Restoration (1660), the episcopacy was restored. The Clarendon Code (1661–5) and a Test Act (1673) against both Nonconformists and Roman Catholics were passed. James II's attempts to evade this ended with the revolution of 1688, after which Protestantism was secured by the Bill of Rights (1689) and the Act of Succession (1701). In the 18th c. the Church of England waned, until the spiritual revival led by John Wesley, whose followers eventually separated from the Church (*METHODISM). An Evangelical party grew up within the Church. Civil disabilities were removed from non-Anglicans by the repeal (1828) of the Test and Corporation Acts and by the emancipation (1829) of Roman Catholics. In the early 19th c., High Church traditions were revived by Keble and Newman in the Oxford Movement. Parliament rejected (1928) a proposal to revise the Prayer Book. The Church is organized in 43 dioceses in the two provinces of Canterbury and York. The archbishop of Canterbury is the primate of all England. The Church Assembly (set up in 1919) submits to parliament matters relating to the Church. The convocations of York and Canterbury are the ancient assemblies of bishops and clergy. The Lambeth Conference (set up in 1867) brings together the bishops of the 327 dioceses of the worldwide Anglican Communion every 10 years

The British civil service is largely recruited by open competitive examination. The treasury supervises it, the permanent head of the treasury being 'head of the civil service'.

civil war war between the citizens of one country.

Civil War, American the struggle (1861–5) between the Union of 23 Northern states (together with Dakota, Colorado, Nebraska, Nevada, New Mexico, Utah and Washington Territories) and the Confederate States of the South. Its causes were political and economic, aggravated by the issue of slavery and expansion to the west. Despite the Missouri Compromise (1820) and the Compromise of 1850, America was split between an agricultural, slave-owning South and an industrialized North favoring free soil and protectionism. Hostility was increased by the Kansas-Nebraska Act (1854) and the Dred Scott Decision (1857) and brought to a head by the election (1860) of Lincoln as president. This provoked seven Southern states to secede from the Union (1860–1), setting themselves up as the Confederate States under Jefferson Davis (Feb. 8, 1861). Lincoln declared that secession was illegal and that he would hold federal forts in the South. The attack on one of these, Fort Sumter, by Confederate forces (Apr. 12, 1861) started the war. The Union forces were led by Grant, Sherman, Sheridan and Meade, and those of the South by Lee and Jackson. After bitter fighting, including the battles of Bull Run, Shiloh, Antietam, Fredericksburg, Chancellorsville, Gettysburg and Cold Harbor, the Southern states surrendered (Apr. 9, 1865) at Appomattox. The war, which cost over 600,000 lives, had been fiercely contested from Pennsylvania to Georgia and west to Missouri. It increased the political and economic dominance of the North over the South. Many issues were left unsettled, but the Union had been preserved, and slavery had been abolished (1863) in the Emancipation Proclamation.

Civil War, English the struggle (1642–52) between Charles I and his son and parliament, also known as the Great Rebellion. The war was the culmination of middle-class Puritan opposition to the Stuarts' claims to rule by divine right. It was caused by the Long Parliament's attempts to control royal policy by withholding supplies. The royalists, or 'Cavaliers', faced the parliamentarians, or 'Roundheads', at Edgehill (1642). Parliament gained the support of the Scots (1643) and Cromwell's army reversed earlier royal successes, gaining decisive victories at Marston Moor (1644) and Naseby (1645). Charles fled from Oxford (1646), surrendered to the Scots, was handed over to parliament (1647). Cromwell's army defeated a royalist invasion by the Scots, and removed the Presbyterian majority from parliament by Pride's Purge (1648). Charles was tried and executed (1649). The Commons set up the Commonwealth, abolishing the monarchy and House of Lords. Cromwell invaded Ireland (1649), and defeated the Presbyterian Scots at Dunbar (1650). Charles II made terms with the Scots and advanced into England, but was defeated by Cromwell at Worcester (1651) and forced into exile.

Civil War, Spanish [illegible] between Republicans and Nationalists. After the replacement of the monarchy by a republic (1931), Spain was governed (1931–3 and 1936) by an anticlerical popular front of republicans, socialists, communists and syndicalists. A Falangist military revolt in Spanish Morocco (July 17, 1936) led by Franco spread quickly to Spain and was supported by monarchists, the Catholic right, landowners and [illegible]. The main republican centers were Madrid, Barcelona, Valencia and Oviedo. The Falangists received massive military aid from Germany and Italy, while the International Brigade was formed (Nov. 1936) to defend the republican cause. By Oct. 1937, Franco held the Portuguese frontier and the north, and bisected (Apr. 1938) the remaining republican territory. The war ended with the fall of Barcelona, the republican capital (Jan. 25, 1939), and of Madrid (Mar. 28, 1939) after a siege of 29 months. The war was fought at the cost of a million lives and economic devastation. Franco's victory led to the establishment of a dictatorship and the restoration of Church property and privileges.

Classicism as commonly opposed to Romanticism, and in particular as the ideal of 17th-c. France, implies a social ideal: man is viewed as a social being consciously and willingly subject to certain disciplines. Corneille depicts man as a rational analytical being capable of heroically mastering his passions. Molière postulates a reasonable form of behavior and satirizes departures from it. Racine, with a shift of emphasis, shows man as a highly analytical being, well aware of good and evil but often powerless to stop himself from choosing evil, none the less the ideal is still in view. Romanticism, on the other hand, cultivates the individual ego, esp. in the rare gifted person, and brings that ego into opposition with a formalistic, unimaginative, or sordidly materialist society. T. E. Hulme makes the non-Romantic view of man's nature rest on the Christian doctrine of original sin and the limited possibilities of human nature, requiring discipline.

Classicism tends naturally to be expressed in classical forms: the alexandrine, the heroic couplet, the ode, the Palladian building, the ideal landscape of Claude and Poussin. It tends also to foster a certain type of analysis: that which leads to self-discipline or irony, as in the great French moralists

Commonwealth of Nations a free association of Britain and certain sovereign independent states, formerly the colonies of the British Empire, and their dependencies. The British Crown is acknowledged by all members as the symbol of their association. Many members accept the British monarch, represented by a governor-general, as their head of state, but others are republics under a president, while

own monarchs. The Commonwealth has no central government, and unites a fifth of the world's land and population. Its members, with dates of entry, are: Great Britain (1931), Canada (1931), Australia (1931), New Zealand (1931), India (1947), Sri Lanka (1948), Ghana (1957), Nigeria (1960), Cyprus (1961), Sierra Leone (1961), Jamaica (1962), Trinidad and Tobago (1962), Uganda (1962), Malaysia (1963), Kenya (1963), Tanzania (1964), Malawi (1964), Malta (1964), Zambia (1964), The Gambia (1965), Singapore (1965), Guyana (1966), Botswana (1966), Lesotho (1966), Barbados (1966), Mauritius (1968), Swaziland (1968), Tonga (1970), Fiji (1970), Western Samoa (1970), Bangladesh (1972), Bahamas (1973), Grenada (1974), Papua New Guinea (1975), Seychelles (1976), Dominica (1978), Solomon Is. —The history of Communism goes back to Karl Marx's 'Communist Manifesto' published (1848) in England, in which he put forward historical materialism. Lenin developed the Communist party after the Russian Revolution (1917), when the U.S.S.R. was established. Stalin opposed Trotsky's insistence on universal revolution and developed a strong dictatorship, which after his death was denounced by Khrushchev as 'the cult of personality'. Since Stalin, there has been a return in Russia to Marxist-Leninism. There are profound differences in the development of Communism in Russia, China, Poland, Yugoslavia and other countries

formed mainly for defense, foreign affairs and trade. The stress is on the sovereign independence of each state. cf. German 'Staatenbund'. Matters not regulated in common are fully controlled by member states, and those confided to the confederation are finally controlled by members in some form. In a federation, by contrast, the stress is on the supremacy of the common government. cf. German 'Bundesstaat', which has full powers over the matters entrusted to it.

— In trade-union usage, a confederation is an association to which member unions have surrendered most of their powers. A federation, by contrast, is an alliance of autonomous unions.

The U.S. Congress consists of a Senate and a House of Representatives. All the legislative powers of the federal government are vested in it by the Constitution. The House of Representatives is composed of 435 representatives, elected for two years. Constitutionally it is the legislative equal of the Senate, but it alone has the right to initiate revenue-raising bills. The Senate is composed of 100 senators elected for six years, one third being elected every two years. There are two senators for each state. Treaties negotiated by the president require ratification by the Senate only, and the president's appointments to major offices in the [illegible] the Senate only. Congressional measures are liable to presidential veto, but bills repassed by a two-thirds majority in each house become law without the president's signature. By the constitutional separation of powers, members of Congress may not hold executive office. Contact between the executive and legislature is limited to the formal, nonbinding exchange of presidential messages and congressional resolutions.

—A political constitution lays down the manner and means by which power shall be exercised by the executive, legislature and judicature. Some countries, e.g. the U.S.A., have a written constitution. Others have unwritten constitutions, although, as in Great Britain, there may be many written rules of law: e.g. Bill of Rights, Parliament Act, Representation of the Peoples Act, Judicature Act, Act of Settlement. Constitutions are defined as flexible or rigid according to the ease with which they may be amended: e.g. the U.S. constitution provides for a long and difficult process for amendment, whereas in Britain the constitution may be modified simply by parliamentary majority.

constitutional law the collection of rules which defines the powers, organization and responsibilities of central and local government. In the U.S.A. the term is restricted to the law that is handed down by the courts in interpreting the written constitution. (The Supreme Court has at times had to resort, however, to common law for defining terms used in the constitution which imply previous common law.) In England the term covers statutes (e.g. Magna Carta, Bill of Rights, Parliament Act), principles evolved from court decisions and common law, and conventions based on precedent and usage which, although not strictly law, if violated might involve a breach of law. In other countries of Europe there has also evolved a large body of administrative law. Administrative courts deal with the [illegible] made affecting individual citizens, which in England and the U.S.A. are dealt with by the ordinary courts.

Cor·neille (kɔrnei), Pierre (1606–84), French poet and dramatist. The main theme of his tragedies is commonly referred to as a conflict between love and honor. But the love itself is honorable; the conflict therefore is almost between two duties, with the more social obligation determining how the conflict is resolved. Corneille creates a masculine world of vigor and positive energy, where self-knowledge breeds self-confidence. The verse (alexandrines) is appropriately vigorous, but sensitive to the dramatic action. 'Le Cid' (1636) shows the love-honor conflict at its most romantic. In 'Polyeucte' (1641) human love conflicts with a Christian call to martyrdom. 'Cinna' (1641) is more human, more ironic and more dramatic. 'Horace' (1640) shows the Roman virtues of stoicism and social obligation at their bleakest

The Crusades were a series of military expeditions made by Christians of W. Europe 13th cc.) to recover Jerusalem and the Holy Land from the Moslems. They were a continuous movement, with a constant stream of pilgrims setting out for the Holy Land, but the following main campaigns may be distinguished. The 1st Crusade (1096–9), inaugurated by Pope Urban II at the Council of Clermont (1095), and preached by Peter the Hermit, was made up of two groups: unorganized bands of peasants, many of whom were killed on the overland journey to Constantinople, and organized companies under French nobles. Nicaea surrendered (1097), Antioch fell (1098), Jerusalem was captured (1099), and four Crusader states were established: the Latin Kingdom of Jerusalem, the principality of Antioch, and the counties of Edessa and Tripoli. The 2nd Crusade (1147–9), preached by St Bernard on the fall of Edessa to the Turks (1144), was led by Louis VII of France and Emperor Conrad III of Germany. The siege of Damascus failed and the two groups returned home. The 3rd Crusade (1189–92), preached by the pope after Saladin took Jerusalem (1187), was led by Philippe II of France, Richard I of England and Frederick Barbarossa of Germany. The emperor was drowned on the journey. The French and English could not agree and Philippe returned to France (1196) after the capture of Acre. Richard secured a three-year truce (1193) guaranteeing free access to Jerusalem for pilgrims. The 4th Crusade (1202–4), instigated by Pope Innocent III, was dominated by the Venetians. Constantinople was taken and the Latin Empire of Constantinople established (1204–61). The 5th Crusade (1218–21), proclaimed by Innocent III (1215) against the Saracens in Egypt, failed. The 6th Crusade (1228–9) was led by Emperor Frederick II, who secured Jerusalem, Bethlehem and Nazareth by treaty. The 7th Crusade (1248–54) was proclaimed by Pope Innocent IV (1245) after the capture of Jerusalem by the Saracens (1244). Louis IX of France led an expedition to Egypt, was taken prisoner and lost Damietta. The 8th Crusade (1270) was led again by Louis IX of France, who died on a preliminary expe[illegible] to Tunis.

The Crusades failed in their military objective. The Moslems retained the Holy Land, and the Turks overran the Byzantine Empire after the Crusader Latin kingdoms had weakened it. They helped to strengthen the power and prestige of the papacy, and to build up the Italian city-states by increasing Eastern trade

Cuba was discovered by Columbus (1492). It was a Spanish colony (1492–1898), except for a brief British occupation (1762–3). Revolts for independence (1868–78, 1895) led to the intervention of the U.S.A. (Spanish-American War, 1898) and the withdrawal of Spain. Cuba was under U.S. military government (1899–1902). It took over government from the U.S.A. (1902), although all military and diplomatic decisions had to have U.S. agreement. The U.S.A. intervened in Cuban affairs (1906–9, 1912, 1917). Cuba became a sovereign state (1934), drew up a new constitution (1940), and entered the 2nd world war with the Allies (1941). General Batista seized power (1952) but was opposed by guerrilla warfare (1953, 1956–8) led by Fidel Castro. Batista was forced to flee and Castro became prime minister (1959). Cuba was declared a people's republic (1960) and within the year the government gained control of the nation's entire resources: land, industry and commerce. Its policy was now oriented toward the socialist countries and against U.S. interests. In 1961, with secret support from Washington, an anti-Castro commando force landed at the Bay of Pigs but was routed by the revolutionary militia. The presence of Russian nuclear missile bases on Cuban soil provoked (1962) a world crisis, which Washington and Moscow resolved peacefully. The decision (1962) by the Organization of American States to exclude Cuba from OAS activities and to sever diplomatic relations (with the exception of Mexico, which retained diplomatic relations) was followed by another (1964) to condemn Cuba for supplying weapons to Venezuelan revolutionary groups, and to suspend trade. Cuba countered this blockade by entering into long-term economic agreements with the U.S.S.R. Cuba adopted its socialist constitution in 1976. Its relations with the U.S.A. were severely strained by the exodus of 125,000 Cubans from the port of Mariel to the U.S.A. (1980). During the mid-1980s relations remained relatively static as both governments refused to compro-

Czech·o·slo·va·ki·a (tʃekəsləvækiə, tʃekəsləvɑkiə) a federal republic (area 49,366 sq. miles, pop. 15,500,000) in central Europe. Capital: Prague. People: 68% Czech, 28% Slovak, with small Magyar, German, Polish, Ukrainian and Russian minorities. Languages: Czech (66%), Slovak (28%), Hungarian (3%). Religion mainly Roman Catholic, 10% Protestant minority, small Orthodox and Jewish minorities. The land is 43% cultivated, 16% pasture and 32% forest. The Bohemian plateau in the west drains to the North Sea and is surrounded by mountain ranges. It is separated from the Moravian depression by a low unproductive divide. In the east the folded ranges of the Carpathians drain to the Black Sea. Annual rainfall: 20 ins. in W. Bohemia, 50 ins. in the Carpathians. Average temperature in Prague (F.): 30° (Jan.), 67° (July). Agriculture is very largely carried out in cooperatives and collective farms. Livestock: cattle, pigs, poultry. Agricultural products: cereals, potatoes, sugar beet, hops. The timber industry is important. Minerals: coal, iron, graphite, silver, copper, lead, salt, aluminum, uranium, radium, kaolin, oil (refined at Bratislava, which is connected by pipeline to Brody, near Kiev). Industry was nationalized in 1948. Manufactures: rolled-steel and engineering products, textiles, paper, fertilizers, cement, shoes, beer, electricity, glass and porcelain, musical instruments, jewelery. Exports: machinery, manufactures. Imports: iron ore, cotton, wool, oil. There are four universities, the oldest at Prague (1348). Monetary unit: koruna (divided into 100 haler). HISTORY Czechoslovakia was created out of the dual monarchy of Austria-Hungary from the old Slav kingdoms of Bohemia, Moravia and Slovakia (1918) under the leadership of T. G. Masaryk and Eduard Beneš. Sudetenland was annexed to Germany after the Munich conference (1938). Germany invaded and created the protectorate of Bohemia and Moravia (1939–45), and the independent states of Slovakia and Ruthenia. An underground resistance movement was organized. The republic was recreated and divided into the three provinces of Bohemia, Moravia with Silesia, and Slovakia, after liberation by the U.S.S.R. (1945). The Communists gained control (1948) and drew up a new constitution for a people's republic, the provinces being replaced by administrative regions (1949). A new constitution was promulgated establishing a socialist republic (1960). About one million Warsaw Pact troops, largely from the U.S.S.R., invaded (Aug. 1968) to put an end to the growing liberalization of the regime, and the country remained occupied. Czechoslovakia became (Jan. 1, 1969) a federation of the Czech states (Bohemia and Moravia) and Slovakia. A dissident group known as the Charter 77 movement was founded (1977) to protest the suppression of human rights and it continued to function during the 1980s as an unofficial political opposition in Czechoslovakia

Declaration of Independence the document of July 4, 1776 in which the American colonies declared themselves independent of Britain. The text is as follows.

When in the Course of human events it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.—That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed,—That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes, and accordingly all experience hath shewn that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless [illegible]

He has refused to pass other Laws for the accommodation of large districts of people, un[illegible]

from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected, whereby the Legislative Powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appro[illegible]

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.

He has affected to render the Military independent of and superior to the Civil Power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation [illegible] among us:

For protecting them, by a mock Trial, from punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our trade with all parts of the world:

For imposing Taxes on us without our Consent:

For depriving us in many cases, of the benefits of Trial by Jury:

For transporting us beyond Seas to be tried for pretended offences:

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here, by de[illegible] against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large Armies [illegible] death, desolation and tyranny, already begun with circumstances of Cruelty & Perfidy [illegible]

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against [illegible] by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the [illegible] Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.

over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

WE THEREFORE, the Representatives of the UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES, that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. — And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor

Democratic Kampuchea 'KAMPUCHEA

Democratic party one of the two main political parties of the U.S.A. (cf. REPUBLICAN PARTY). Its origins are traditionally linked with Jefferson's anti-Federalists, who supported states' rights and the interests of workers and small farmers. The party took its present name and developed its organization during the presidency (1829–37) of Jackson. The Democrats won all presidential elections except three in the period 1800–60. They were split (1854) over slavery, became associated with the slave-owning South, and were out of office after the Civil War. Campaigning for lower tariffs, they were again in power (1885–9 and 1893–7) under Cleveland, and (1913–21) under Woodrow Wilson. Under Franklin D. Roosevelt (1933–45), the Democrats were identified as the reform party with the New Deal. They remained in office until 1953, and regained the presidency in 1961, but lost it again (1968). At the 1972 convention George McGovern gained the nomination, stressing an end to the Vietnam War and party reform; he lost to Richard Nixon. In 1976, Democrat Jimmy Carter won a close race against incumbent president Gerald Ford. Carter had a difficult term, with poor congressional relations, stalled energy initiatives, high inflation rates, and an indifferent reputation in foreign affairs. Republican Ronald Reagan won a landslide victory in 1980, and brought the first Republican majority to the Senate since 1954. In 1984, Walter Mondale and his running mate, Geraldine Ferraro, were unable to unseat Reagan, although the Democratic party gained ground with black voters.

Den·mark (denmɑrk) a kingdom (area 16,650 sq. miles, pop. 5,119,150 excluding Greenland and the Faroe Is) in N. Europe. It comprises the mainland of Jylland (Jutland) and 100 inhabited islands of which the most important are Zealand, Lolland, Funen, Falster, Langeland and Bornholm (plus the Faroe Is in the N. Atlantic, and Greenland). Capital: Copenhagen. People and language: Danish, with very small German and Swedish minorities. State religion: Lutheran. The land is 75% arable, 10% forest and 9% pasture. Denmark is low and flat, mostly under 100 ft (highest point: Ejer Bavnehøj, 565 ft) with indented coasts, no large rivers and few lakes. The climate is temperate [illegible] (F.: 32° (Jan.), 62° (July). Livestock: cattle, pigs, poultry. Agricultural products: barley, oats, rye, wheat, fodder, sugar beet, bacon, milk, butter, cheese, eggs, fruit. Mineral resources: peat, lignite. Fishing is important. Manufactures: cement, food processing, engineering, agricultural machinery, shipbuilding, porcelain, silverware, furniture. Exports: meat, livestock, dairy products, fish, machinery. Imports: machinery, metals, fuels, fertilizers, cattle feeding stuffs. Ports: Copenhagen, Helsingor, Frederikshavn, Aarhus, Esbjerg. Universities: Copenhagen (1479), Aarhus (1933). Monetary unit: krone (divided into 100 øre). HISTORY. Denmark emerged as a kingdom (9th c.), and the Vikings raided England and France. The Danish kings ruled also in England (1016–42), Norway (1028–47, 1380–1814), Sweden (1397–1532) and Schleswig-Holstein (1460–1864). The Union of Kalmar (1397) brought about the effective union of Denmark, Sweden, Norway, the Faroes, Iceland and Greenland, under King Eric of Pomerania. The Danish crown was elective but remained in the Oldenburg line (1448–1863), and became hereditary (1660) and absolute. Denmark adopted Lutheranism (1536). It was involved in war with Sweden (16th and 17th cc.). Greenland was administered by Denmark (1729) and became a Danish colony (1814). Norway was ceded to Sweden (1814). A liberal constitution with a limited monarchy was adopted in 1849. Schleswig-Holstein was lost in the war with Austria and Prussia (1864). Denmark remained neutral in the 1st world war. Iceland became self-governing (1918) and an independent republic (1944). Denmark was occupied by the Germans (1940–5), and organized a strong resistance movement. Greenland was incorporated as a province of the kingdom (1953) and received home rule in 1979. In 1973, Denmark became a member of the European Economic Community. A center-right coalition government took over in 1982

Des·cartes (deɪkɑ́rt), René (1596–1650), French philosopher, physicist and mathematician. He founded the science of analytical geometry ('la Géometrie', 1637) and discovered the laws of geometric optics. While in his scientific work he reasoned as a materialist, in metaphysics he appears as an idealist. He founded modern metaphysics, rejecting Scholasticism and providing the method of reasoning generally called Cartesianism. In 'Discours de la méthode' (1637) he divests himself of all previously held beliefs, to rebuild on his own basis of certitude, i.e. the fact of his self-conscious existence: 'dubito ergo cogito: cogito ergo sum' (I doubt, therefore I think. I think, therefore I am). By intuition and deduction he both reveals the truth of his own existence and restates the ontological argument for the existence of God. His thought is further developed principally in 'Méditations métaphysiques' (published in Latin 1641, and in French 1644), 'Principia philosophiae' (Latin 1644, French 1647) and 'les Passions de l'âme' (1649), as well as in a vast correspondence

novelist. His first book, 'Sketches by Boz' was a collection of essays written while he was a reporter in the House of Commons. 'Pickwick Papers' (1837) made him famous. A series of novels followed, at almost yearly intervals, first published serially and including 'Oliver Twist' (1841), 'David Copperfield' (1850), 'A Tale of Two Cities' (1859) and 'Great Expectations' (1861). They are remarkable for their abundance of memorable characters (humorous, grotesque or sinister), and for the variety of the humanity (mainly lower-class) which they portray. His attacks on certain abuses in orphanages and schools, courts and prisons, contributed to their reform. He reserved his grimmest satire for the inhumanity of commercialism and industrialism; and in 'Hard Times' (1854) he attacked their underlying concepts

Dominican Republic an independent state (area 19,129 sq. miles, pop. 5,812,900) in the West Indies (Greater Antilles group, *ANTILLES). It occupies the eastern two thirds of the island of Hispaniola. Capital: Santo Domingo. People: 60% mulatto, 28% of European (Spanish) descent, 12% of African origin. Language: Spanish. Religion: predominantly Roman Catholic. The land is 70% forest and 14% arable. The Cordillera Central (highest point Mt Tina, 10,300 ft) crosses the country from east to west in four parallel ranges. The tropical trade wind climate is marked by dry winters, wet summers and frequent earthquakes and hurricanes. Annual rainfall: 60 ins in the northeastern lowlands, 50–100 ins along the north coast, 40–50 ins in the southeast plains, 20 ins in the southwest interior. Average temperature (F.) at Santo Domingo: 76° (Jan.), 81° (Sept.). It is cooler inland. There is periodic snow in the mountains. Livestock: cattle, hogs, goats. Agricultural products: sugar (esp. in the southeast), coffee, cacao, rice, tobacco, molasses, corn. Mineral resources: gold, copper, high-quality iron ore, gypsum, silver, platinum. Manufactures: rum, textiles, cement, paper, glass. Exports: sugar, molasses, cocoa, coffee. Imports: machinery, iron and steel, foodstuffs, oil, vehicles. Ports: Santo Domingo, Puerto Plata. University: Santo Domingo (1538). Monetary unit: peso oro (divided into 100 centavos). HISTORY: Spain settled the eastern part of Hispaniola as the colony of Santo Domingo (the western part being colonized by France, *HAITI). It became independent of Spain (1821) but was subjected to Haitian Negro domination (1822–

established (1844), followed by a long period of anarchy and tyranny. U.S. Marines occupied it (1916–24). The U.S.A. controlled the customs (1907–40), and dominated the sugar industry. Gen. Rafael Trujillo established a dictatorship (1930). He was assassinated (1961), and his death led to some liberalization of the régime. Constitutional government was restored when Juan Bosch was elected president (1962), but he was deposed (1963) by the military. When a pro-Bosch faction of the army staged (1965) a coup d'état it led to the intervention of U.S. Marines, later incorporated in an OAS force to which Brazil, Honduras, Nicaragua, Paraguay (themselves all under military government) and Costa Rica contributed. The OAS contingent was withdrawn (1966) after elections in which Joaquin Balaguer defeated Bosch. Balaguer remained in office until 1978 when he was defeated by Antonio Guzman. —The ear's function is to convert sound waves into nervous impulses which are conveyed via the auditory nerve to the brain, where they give rise to the sensation of hearing. Sound waves are collected by the pinna, the externally visible part of the ear, and pass down the channel of the external ear to the drum, a membrane which they cause to vibrate. These vibrations are transmitted across the cavity of the middle ear by a system of small interlocking bones, the hammer, anvil and stirrup; and are then conveyed to the cochlea, a spiral organ in the inner ear, which translates them into nervous impulses. The inner ear also contains the labyrinth, a system of channels filled with fluid and projecting in all three dimensions. Movement of the head causes movement of the fluid inside the labyrinth, thus setting up other nervous impulses, which are important for balance. The organs of the inner and middle ear are contained inside the skull. The middle ear is connected with the mastoid air cells and, via ... with the mouth

Ed·ward I (ɛdwərd) (1239–1307), king of England (1272–1307), son of Henry III. An astute soldier, he led royalist troops to victory in the Barons' War (1264–6), and conquered Wales in two campaigns (1277 and 1282–3). He placed John de Baliol on the throne of Scotland (1292), but deposed him (1296) after Baliol had formed an alliance with Philippe IV of France. While intermittently at war with France, Edward defeated (1298) a Scottish revolt under Wallace, invaded Scotland again (1303), but had to face another revolt (1306) under Robert the Bruce. Edward's greatest achievements were in administration. He issued writs and laws to restrict the jurisdiction of feudal and Church courts. His parliament (1295) was later quoted as a precedent, and became known as the Model Parliament

Ed·ward·i·an (ɛdwɔ̀rdi:ən, ɛdwɔrdi:ən) *adj.* of the time of Edward VII of England ‖ of the style of this period

Edward II (1284–1327), king of England (1307–27), son of Edward I. Totally inept as a ruler, he left the government largely to his favorites Gaveston, who was murdered (1312) by a baronial faction, and the Despensers, who were put to death (1326). Edward's one attempt to continue his father's conquest of Scotland ended in failure at Bannockburn (1314). The barony strongly opposed the king's incompetent rule, attempting (1311) to subject Edward to a committee of 'lords ordainers'. His queen, Isabella, in alliance with Roger Mortimer, invaded (1326), deposed Edward and put him to death (1327)

Edward III (1312–77), king of England (1327–77), son of Edward II. Having freed himself (1330) from subjection to his mother, Isabella, and to Roger Mortimer, he renewed the war with the Scots, defeating them in 1333 and 1346. With the outbreak (1337) of the Hundred Years' War, he destroyed the French fleet at Sluis (1340), invaded France and, with his son, the Black Prince, won notable victories at Crecy (1346), Calais (1347) and Poitiers (1356). The Treaty of Bretigny (1360) gave Edward half of France south of the Loire. Meanwhile, the king had gone bankrupt (1345) and the economy was suffering from the effects of the Black Death (1348–9, 1361–2 and 1368–9). The war with France was resumed (1369), but by 1375 Edward had lost all his French possessions except Calais, Bordeaux, Bayonne and Brest. At the end of his reign, the king left the government in the hands of his son, John of Gaunt

Edward IV (1442–83), king of England (1461–83), son of Richard, duke of York. With the aid of Warwick 'the kingmaker' he defeated the Lancastrians (1461) and won the throne. Warwick led an unsuccessful rebellion (1469). Edward was driven into exile (1470–1) when Warwick restored Henry VI to the throne. Edward retaliated (1471), killing Warwick in battle, and murdering Henry in prison. A brief war (1475) in France resulted in an annual subsidy from Louis XI, which freed Edward from financial dependence on parliament. He took a personal interest in promoting trade, and was the patron of Caxton

Edward V (1470–83), king of England (1483), son of Edward IV. Under the protection of his uncle, the duke of Gloucester, he was placed in the Tower of London, where he was murdered, together with his brother Richard, duke of York, probably at the instigation of Gloucester, who succeeded as Richard III

Edward VI (1537–53), king of England and Ireland (1547–53), son of Henry VIII. A sickly

youth, he was a pawn in the struggle for power between Edward Seymour, duke of Somerset, and John Dudley, earl of Warwick. Neither protector could solve the economic problem of inflation. The reign marked a swing to extreme Protestantism, with the second Book of Common Prayer (1552) and the Forty-two Articles of the Church of England (1553).

Edward VII (1841–1910), king of Great Britain and Ireland (1901–10), son of Victoria. He played an active part in public life in the later years of his mother's reign, traveling widely, and he was particularly popular because of his interest in the theater and sport. His love of pageantry made his reign a reaction against the austerity of Victorianism. He took an active interest in foreign affairs, notably in the signing of the Entente Cordiale with France (1904), and of an agreement with Russia (1907).

Edward VIII (1894–1972), king of Great Britain and Ireland (1936), son of George V. As prince of Wales he demonstrated his interest in foreign trade and social problems, and won popularity. He abdicated, after a reign of 10 months, in order to marry Wallis Simpson, a twice-divorced American. He was made duke of Windsor and was governor of the Bahamas (1940–5).

Edward (1453–71), prince of Wales, son of Henry VI. The Lancastrian candidate for the throne at the start of the Wars of the Roses, he was defeated and killed by Edward IV at Tewkesbury (1471).

Edward, 'the Black Prince' (Edward of Woodstock) *BLACK PRINCE.

Edward 'the Confessor' (c. 1002–66), saint and king of England (1042–66), son of Ethelred II. He devoted himself to religion and the rebuilding of Westminster Abbey. A weak ruler, he was unable to control the nobility, notably Earl Godwin, whose son Harold claimed the succession on Edward's death, in opposition to William of Normandy, who claimed that Edward had made him his heir. Feast: Oct. 13.

Edward 'the Elder' (c. 870–924), king of Wessex (899–924), son of Alfred. He continued his father's wars with the Danes, driving them back from East Anglia and the E. Midlands (910–17). He annexed Mercia (918) and by 920 was ruler of all England south of the Humber, as well as being the recognized overlord of Scotland, Northumbria and part of Wales.

Edward 'the Martyr' (c. 963–78), king of England (975–8), son of Edgar. After his murder, which was probably instigated by his stepmother, he was widely regarded as a saint. Feast: Mar. 18.

Edward, Lake (formerly Albert Edward Nyanza) a lake (length 44 miles, area 830 sq miles) at 3,000 ft in the Albertine rift valley of Uganda on the Zaire boundary. Crater lakes on the northern shores yield salt, exploited industrially.

Ed·wards (édwərdz), Jonathan (1703–58), American theologian and metaphysician. He was a strict Calvinist and a leader of American revivalism. His best-known work is 'The Freedom of the Will' (1754).

Edwards Plateau a highland region (height 2,000–5,000 ft) in S.W. Texas, an extension of the Great Plains.

Ed·win (édwin) (c. 585–633), king of Northumbria (617–633), under whose reign Paulinus established a Christian see at York. His supremacy was recognized in all the other English kingdoms except Kent.

Ed·wy (édwi:) (c. 938–59), king of the English (955–9), son of Edmund I. He drove St Dunstan into exile (957) and quarreled with the Church and the nobles.

E·gypt (i:dʒipt) (officially Arab Republic of Egypt) a republic (area 386,198 sq. miles, pop. 44,000,000) occupying the northeast corner of Africa and the Sinai peninsula, cut by the Gulf of Suez and by the Suez Canal (101 miles), which connects the Gulf with the Mediterranean. People and language: Arabic with Greek, Nubian, Berber, Jewish, Italian and Armenian minorities. Religion: 91% Moslems, 8% Christians (mainly Copts), 1% Jews and others. The Nile runs the length of the mainland. The population is concentrated along its valley and on its delta, at the head of which is Cairo, the capital. West of the Nile is the Libyan Desert, east is the Arabian Desert, rising to 7,165 ft near the Red Sea. The highest mountains are on Sinai (Katherina, 8,662 ft). The country divides into Lower Egypt (Wagh-el-Bahari) north of Cairo and Upper Egypt (El-Said) south of Cairo. The Nile rises between June and Sept. and is lowest in May. Flood level: 40 ft in Asyut, 22 ft in Cairo. Climate: Mediterranean in the north, desert elsewhere. Annual rainfall: Alexandria 8 ins, Cairo 1 in, the south nil. Average winter temperatures (F.): 66° along the Mediterranean, 75° in Aswan. Average maximum summer temperatures: Alexandria 87°, Cairo 96°, Aswan 108°. A hot, dry dusty wind (the khamsin) blows Mar.–June. Livestock: cattle, water buffaloes, sheep, donkeys, poultry, goats, camels. Agricultural products: cotton (2nd world producer), cereals, rice, beans, sugarcane, dates, onions. Minerals (chiefly in the Arabian Desert): oil, phosphates, iron ore, gypsum, salt, manganese. Manufactures: textiles, foodstuffs, cement, glass, metals, sugar. Hydroelectricity and irrigation are derived from the Aswan High Dam and other barrages. Exports: cotton. Imports: machinery, wheat, iron and steel, oil, vehicles, fertilizers. Ports: Alexandria, Port Said, Suez. There are five universities, the oldest being El Azhar (Cairo, 972) and Cairo (1925). Monetary unit: Egyptian pound

[illegible] kingdoms of Upper and Lower Egypt were united (c. 3110 B.C.) by Menes, who founded the first of the thirty dynasties. The Archaic period (dynasties 1 and 2, c. 3110–c. 2665 B.C.) is little known. The Old Kingdom (dynasties 3–6, c. [illegible] mids of Giza. The capital was probably at Memphis. The power of the pharaoh was at its height, but it then disintegrated into feudal anarchy (dynasties 7–10, c. 2180–c. 2052 B.C.). The Middle Kingdom (dynasties 11 and 12, c. 2052–c. 1786 B.C.), centered on Thebes, was the classic period of ancient Egyptian art. Economic progress led to expansion abroad. The Hyksos, who had invaded the delta, overran Egypt (dynasties 13–17, c. 1785–c. 1570 B.C.). Under the New Kingdom (dynasties 18–20, 1570–1075 B.C.) the Hyksos were expelled and a strong central government was set up with a large bureaucratic administration. A great empire was established from Nubia to the Euphrates, but it collapsed under the invasion of the Hittites. The Late New Kingdom (dynasties 21–25, 1075–657 B.C.) saw Egypt under foreign rule, begun by the Libyan Sheshonq I of the 22nd dynasty (940–730 B.C.) and continued by the Ethiopians. Egypt was occupied by the Assyrians (670–654 B.C.). After the native rule of the Saite period (26th dynasty, 664–525 B.C.), Egypt was occupied by the Persians (525–332 B.C.) who were expelled (332 B.C.) by Alexander the Great. After his death (323 B.C.) the Ptolemies ruled as his successors, extending their empire to Palestine and Syria, and making Alexandria a center of Hellenistic culture. After the death of Cleopatra (30 B.C.) Egypt became a Roman province (30 B.C.–395 A.D.). Christianity was introduced (3rd c.). Egypt passed to the Byzantine Empire (395–642), which repressed the Monophysite Coptic Christians, and was conquered by the Moslems (640). As part of Islam (642–1517), it was governed first as a province of the Caliphate (646–968), then by the Fatimid rulers (969–1171), who founded Cairo (969), and then by the Ayyubid rulers (1171–1249), who united Egypt and Syria. The rule of the Mamelukes (1249–1517) was notable for its architecture. With the discovery of the route around the Cape of Good Hope, Egypt lost its commercial importance and became an impoverished province of the Ottoman Empire (1517–1879), administered by Turkish pashas. Napoleon invaded Egypt (1798), but the French were defeated by the British and Turkish forces (1801). The Albanian Mohammed Ali became pasha (1805–48), began to modernize Egypt and conquered Arabia (1818) and the Sudan (1822). His son Ibrahim occupied Syria (1832–40) but was forced by Britain and France to withdraw (1841). Ismail governed as pasha (1863–7) and as khedive (1867–79). He opened the Suez Canal (1869), but had to accept Anglo-French financial control when his government became bankrupt. His abdication (1879) was followed by a revolt (1882) led by Arabi Pasha. This was crushed by the British, who occupied Egypt (1882–1914). Under Abbas Hilmi II (1892–1914) an Anglo-Egyptian Condominium of the Sudan was established (1899). At the start of the 1st world war, Turkish suzerainty was abolished and a British protectorate was declared (1914–22) until an independent kingdom was formed (1922) under Fuad I (1922–36). His son Farouk (1936–52) signed the Anglo-Egyptian Treaty (1936), which made Britain and Egypt allies and limited British forces to the canal zone for 20 years. Egypt was a British base in the 2nd world war, and declared war on Germany and Japan in Feb. 1945. The Arab League was set up (1945). Egypt fought Israel unsuccessfully (1948–9). Gen. Neguib seized power (1952) and Farouk abdicated. A republic was established (1953). Col. Nasser took over as premier (1954). When Anglo-American financial support for the Aswan High Dam was withdrawn, Nasser nationalized the Suez Canal (July 26, 1956). Israel, claiming she was subject to border raiding, attacked Egypt (Oct. 29, 1956). British and French forces invaded the canal zone (Oct. 31, 1956) but the U.N. ordered a cease-fire (Nov. 6, 1956). Egypt and Syria formed the United Arab Republic (1958). Yemen joined (1958) the United Arab Republic, creating the United Arab States. Syria and the Yemen withdrew (1961). Egypt again fought Israel (June 1967) but was defeated. The Suez Canal remained closed. Nasser was followed (Oct. 1970) by Anwar Sadat as president. Sadat expelled 20,000 Soviet military advisers and experts (1972), and gained wide support when Egypt regained a strip of the Sinai from Israel during the October War (1973) and the Suez Canal was reopened (1975). He concluded a peace treaty with Israel (1979) after the Camp David talks with Israeli Prime Min-

ister Begin. He was assassinated (1981) by Muslim fundamentalists and was succeeded by Hosni Mubarak, who tried to improve relations with the rest of the Arab world

É·lam (i:ləm) an ancient kingdom at the head of the Persian Gulf, founded before 4000 B.C., frequently at war with its neighbors until conquered (642–639 B.C.) by Assyria
e·land (i:lənd) *n. Taurotragus oryx*, the largest antelope of Central, S. and E. Africa. It stands about 6 ft high. Both sexes are horned [Du. *eland*, elk]
élan vital [illegible] (spontaneous urge which according to Bergson is [illegible]
e·lapse (ilæps) *pres. part.* **e·laps·ing** *past* and *past part.* **e·lapsed** *v.i.* (of time, or an equivalent) to pass by [fr. L. *elabi* (*elapsus*), to glide away]
e·las·mo·branch (ilæzməbrænk) *n.* a member of *Elasmobranchii* or *Chondrichthyes*, a class of fish including most cartilaginous types, e.g. sharks, skates, rays, dogfish [Mod. L. fr. Gk [illegible]
e·las·tic (ilæstik) **1.** *adj.* having the ability to recover its original size or shape after deformation, springy, with the power to give or bend without snapping or breaking, adaptable to circumstances, *a plan elastic enough to allow for alternatives*, (of persons) recovering quickly after a setback, *an elastic temperament*, made of (or partly of) elastic, *an elastic band* **2.** *n.* vulcanized rubber thread, often covered with or woven into fabric, which can be stretched and which returns to its original size when released [illegible] *pop.* a rubber band **e·las·ti·cal·ly** *adv.* **e·las·tic·i·ty** (ilæstísiti) (ilæstisiti) *n.* the ability to resume the original size or shape after deformation. The deformation may be change of length, change of volume or change of shape and is called the strain, the force per unit area which causes the strain being called the stress [illegible] if the stress exceeds the elastic limit, or as a result of fatigue due to prolonged stress, the [illegible]
e·las·ti·cized (ilæstisaizd) *adj.* woven with elastic thread, made with elastic insertions [fr. Mod. [illegible]

dent. Each state has the same number of members of the college as it has representatives in both houses of Congress. All the electoral votes of a state go for a single candidate. Many attempts have been made to reform or eliminate the college.

Electoral Commission *COMPROMISE OF 1877.

e·lec·tor·ate (ilektərit) *n.* the whole body of those who have the right to vote in a political election ‖ (*hist.*) the office or dominions of an elector of the Holy Roman Empire.

E·lec·tra (ilektrə) (*Gk mythol.*) the daughter of Agamemnon. She helped her brother Orestes to avenge their father's death by killing his murderers: their mother, Clytemnestra, and her lover, Aegisthus ‖ a daughter of Oceanus, mother of Iris and the Harpies.

Electra complex (*Freudian psychol.*) a complex in girls or women resulting from an attachment to the father that involves unconscious rivalry with the mother (cf. OEDIPUS COMPLEX).

e·lec·tric (iléktrik) *adj.* of or pertaining to electricity, containing, produced by, producing or worked by electricity ‖ extremely tense, nervously excited, *the mood of the audience was electric* **e·lec·tri·cal** *adj.* [fr. Mod. L. *electricus* fr. *Gk ēlektron*, amber (which acquires a charge when rubbed)].

electrical conductivity the reciprocal of the resistivity of a substance.

electric arc *ARC.

electric arc furnace steelmaking device using high-quality scrap or ore with polluting elements eliminated.

electric blackboard telephone-connected display board that receives and enlarges transmitted data in graphic or digital form.

electric blue a harsh, bright, slightly greenish blue.

electric chair an electrified chair used to electrocute a condemned criminal ‖ this as a penalty.

electric charge the property of certain elementary particles which causes them to exert forces on one another and which can be characterized as either negative (like that on an electron) or positive (like that on a proton), according to whether an unknown charge is repelled by or attracted to an electronic-type charge (since charges of the same type repel and those of opposite types attract one another). Mks unit: coulomb = 6.242×10^{18} elementary electronic charges ‖ a particle or particles having this property.

electric circuit any arrangement of conductors through which an electric current can flow, usually including one or more devices (batteries, generators, etc.) that supply current, those that operate on the current, and various types of control for the resistance, voltage, current, etc. of the circuit.

electric current a flow of charged particles (e.g., electrons or protons) accompanied by the fields that they generate (mks unit: ampere).

electric eel *Electrophorus electricus*, a large South American eel (*ELECTRIC ORGANS).

electric eye a device that includes a photoelectric cell used as an automatic controlling mechanism.

electric field the field surrounding an electric charge or a moving magnet, being defined at any point by the force acting on a unit positive test charge placed at that point.

electric furnace a furnace which, by using the heating effect of an electric current, allows very high temperatures to be reached.

electric guitar a guitar whose sound is magnified by an electronic pickup which transmits the tone to an amplifier and loudspeaker.

e·lec·tri·cian (ilektrifən) *n.* someone whose trade is making, installing, maintaining or repairing electrical equipment.

e·lec·tric·i·ty (ilektrisiti:) *n.* a basic form of energy that is a property of certain fundamental particles of matter and consists of mutually attractive positively and negatively charged particles (protons and electrons, respectively, or positrons and electrons). It is manifested by magnetic, chemical and radiant properties, measured in electrostatic or electromagnetic units ‖ an electric current, or stream of electrostatic electricity (the [illegible] electricity).

electric light light produced by an electric current in any one of several devices, e.g., a fluorescent lamp, an arc lamp, an incandescent lamp.

electric organ a musical instrument (typically with two manuals and a pedal keyboard) producing a great range of tones, incl. tones similar to those of the pipe organ.

[illegible] in some fish, giving them the property of [illegible] electric eels, electric rays and the African cat[illegible].

electric potential a scalar quantity equal to the value of the potential function at some point in an electric field compared to its value at some standard point (e.g., infinitely far from all charges). It gives the energy change in moving a unit positive charge from the standard location to the point.

[illegible] *dinidae* having electric organs. They inhabit warm seas.

electric shock the painful spasm occurring when a current of electricity passes through the body. It may be lethal.

[illegible] marked by an intense electric field within a cloud or clouds.

e·lec·tri·fi·ca·tion (ilektrifikéiʃən) *n.* an electrifying or being electrified ‖ the change from the use of some other power to that of electric power, *the electrification of a railroad*.

[illegible] *past* and *past part.* **e·lec·tri·fied** *v.t.* to produce an electric charge or current in ‖ to cause to function by electric power ‖ to thrill or startle as though by an electric shock.

e·lec·tro (ilektrou) *n.* an electrotype [Gk].

electro- (ilektrou) *combining form* electric ‖ electrically ‖ electricity ‖ electrolysis [fr. *Gk ēlektron*, amber].

e·lec·tro·a·nal·y·sis (ilektrouənælisis) *n.* the use of [illegible].

[illegible] *n.* the tracing made by an electrocardiograph.

[illegible] (ilektroukardiəgruf) *n.* an apparatus that detects and records the electric activity of the cardiac muscle, and that is used to diagnose [illegible] **electrocardiography** (ilektroukardiɔgrəfi:) *n.*

e·lec·tro·chem·i·cal (ilektroukémik'l) *adj.* of or relating to electrochemistry.

electrochemical equivalent the mass of a substance reacting when a specified quantity of charge is passed during electrolysis. It is often expressed in grams per coulomb, the value for silver (the usual standard) being 0.01118 gm/coulomb (*FARADAY).

electrochemical series electromotive series.

e·lec·tro·chem·is·try (ilektroukemistri:) *n.* the science dealing with chemical changes produced by the flow of electric currents and with the energy relations of those changes. It has applications in the production of aluminum or chlorine, in the purification of copper, etc.

[illegible] the property of changing color in response to an electrical impulse, e.g., as iridium can be **electrochromic display** *n.*

e·lec·tro·con·vul·sive therapy (ilektroukənvʌlsiv) therapeutic electroshock treatments used in mental health programs to relieve depression. *abbr.* ECT. **syn** electroconvulsive shock, electroshock therapy (EST).

[illegible] *n.* the measurement and recording of brain waves through electrodes placed at the cerebral cortex. **electrocorticographer** *n.* **electrocorticographic** *adj.* **electrocorticographically** *adv.*

e·lec·tro·cute (iléktrəkju:t) *v.t. pres. part.* **e·lec·tro·cut·ing** *past* and *past part.* **e·lec·tro·cut·ed** to administer a fatal electric shock to ‖ to put (a criminal) to death in this way. **e·lec·tro·cu·tion** *n.* [fr. ELECTRO- + *cute* as in 'execute'].

[illegible] tors (anode or cathode) by which an electric current is passed through a device such as an electrolytic cell or a discharge tube by an electron [illegible] cathode). [fr. ELECTRO- + Gk *hodos*, way].

[illegible] trode by electrolysis. 2. *v.t.* to deposit by [illegible] electrical properties of the skin.

e·lec·trode·sweep (ilektroudswi:p) *n.* (*mil.*) a magnetic cable sweep in which the water forms part of the electric circuit.

e·lec·tro·di·al·y·sis (ilektroudiælisis) *n.* a process that uses electrical current applied to permeable membranes to remove minerals from water, e.g., to desalinate salt water or [illegible].

e·lec·tro·duct (iléktrədʌkt) *n.* system for carrying high-voltage electricity.

e·lec·tro·dy·nam·ic (ilektroudainæmik) *adj.* of or relating to electrodynamics. **e·lec·tro·dy·nam·ics** *n.* the science which studies electrical forces (electrical current and magnetism) in interaction.

[illegible] tor) *n.* an instrument for measuring electric current, activated by the torque due to the reac[illegible].

e·lec·tro·en·ceph·a·lo·gram (ilektrouinséfələgræm) *n.* the tracing made by an electroencephalograph.

e·lec·tro·en·ceph·a·lo·graph (ilektrouinséfələgræf, ilektrouinsefələgraf) *n.* an instrument which measures and records brain waves. It is used as an aid in the diagnosis of certain brain disorders, e.g., epilepsy.

[illegible] *n.* antipollution chimney device that removes particles by electr[illegible].

[illegible] (ilektrouifiʃiŋ) *n.* technique of catching fish by utilizing their tendency to seek the source of a direct electric current.

[illegible] (ilektrougæsdainæmiks) *n.* use of flow of high-pressure combustion gas to generate electricity, esp. in high-voltage electric-power generation, air-pollution control, and paint spraying. **electrogasdynamic** *adj.*

[illegible] *n.* creation of electricity, esp. by living organisms. **electrogenic** *adj.*

e·lec·tro·hy·drau·lics (ilektrouhaidrɔliks) *n.* [illegible] of producing pulsating discharges of electricity under a liquid, creating shock waves and certain chemical reactions. **electrohydraulic** *adj.* **electrohydraulically** *adv.*

e·lec·tro·ki·net·ics (ilektroukinétiks, ilektroukainétiks) *n.* the branch of physics dealing with the steady motion of charge and the behavior of charged particles in electric and magnetic fields (cf. ELECTROSTATICS).

e·lec·trol·y·sis (ilektrɔlisis) *n.* the passing of an electric current through an electrolyte to produce chemical changes in it. The current is carried in the electrolyte by ions that migrate to the electrodes where they may react, forming new substances ‖ depilation by means of an electric current applied to the body with a needle-shaped electrode [fr. ELECTRO- + Gk *lusis*, loosening, dissolution].

[illegible] *n.* a liquid solution or fused salt that conducts electricity, the charge being carried by the movement of ions (cf. the movement of electrons in metallic conductors) ‖ a solid substance that when fused or dissolved [illegible] **electrolytic** (ilektrəlitik) *adj.* [fr. ELECTRO- + Gk *lutos*, soluble].

e·lec·tro·lyze (ilektrəlaiz) *pres. part.* **e·lec·tro·lyz·ing** *past* and *past part.* **e·lec·tro·lyzed** *v.t.* to cause to undergo electrolysis [fr. ELECTRO- + Gk *lusis*, loosening, dissolution].

e·lec·tro·mag·net (ilektroumægnit) *n.* a coil of magnetic material (e.g., soft iron) about which is wound a coil of wire that produces a strongly directed magnetic field only when a current is allowed to flow through the wire. Electromag[illegible] **electromagnetic** (ilektroumægnétik) *adj.*

electromagnetic field the region surrounding a moving electric charge that consists of magnetic and electric force fields specially related, e.g., as to orientation and strength, and that possesses a definite amount of energy.

electromagnetic induction [illegible] due to the relative motion of the conductor and a magnetic field, or by a change in the magnetic [illegible] tor or circuit.

electromagnetic wave [illegible] through space or a medium by simultaneous periodic variation in the electric and magnetic field intensity at right angles to each other and [illegible] netic spectrum includes radio waves, microwaves, infrared, visible and ultraviolet radia[illegible].

tion, X rays, gamma rays and cosmic rays (in order of decreasing wavelength) and each [illegible] with a photon whose energy increases with decreasing wavelength The speed of electromagnetic waves is 2 998 x 10^8 m/sec in a vacuum This is regarded in relativistic physics as being a universal constant and the theoretical limit to the speed attainable by a particle or body, even one with a rest mass of 0

e·lec·tro·mag·net [illegible] the magnetic force produced by an electric current (e g , in an electromagnet) || the science which studies the interrelation of electricity

e·lec·tro·met·al·lur·gy (ilektroumetələrdʒi) *n* the science of the electrical processes or methods used industrially for separating metals from alloys, or for refining or shaping metals

e·lec·trom·e·ter [illegible] types of instrument that are actuated by the forces between charged bodies and are used to indicate the presence of ionizing radiation and to measure potential differences, e g , an electroscope **e·lec·tro·met·ric** (ilektroumetrik) *adj* **e·lec·tro·met·ri·cal·ly** adv **e·lec·trom·e·try** (ilektromitri) *n*

e·lec·tro·mo·tive (ilektroumoutiv) *adj* producing electric current

electromotive force (*abbr* emf) potential difference

electromotive force series [illegible]

electromotive series the chemical elements or ions arranged according to their standard electrode potential, the order usually showing the tendency of any given element to reduce the ones below it in the series (*OXIDATION REDUCTION*)

e·lec·tro·my·o·graph [illegible] vice to record electrical voltage generated by [illegible] (EMG)

e·lec·tron (ilektron) *n* a lepton of rest mass 0 511 x 10^6 eV (9 107 x 10^{-28} gm) and electric charge −1 (the electron's charge is the fundamental unit of electric charge equal to 1 602 x 10^{-19} coulomb) The electron is a constituent of the atom (ELECTRIC + *-on*, fundamental particle)

electron affinity the energy required to remove an electron from an ion possessing a [illegible]

e·lec·tron·a·sis [illegible] (*med*) semiconsciousness, sometimes passing to unconsciousness, created by electric shock, used in mental therapy, sometimes by anesthesia *Cf* ELECTROCONVULSIVE THERAPY

e·lec·tron·ic [illegible] controlled by an electron beam, used in presenting graphic data on a video screen

electron diffraction an effect due to the fact that a beam of electrons behaves as a wave of [illegible] and can therefore be diffracted by slits that are roughly of the order of the atomic dimensions (1 [illegible] fraction is used to study the structure of crystals, [illegible] structure of gases, by allowing a beam of electrons of known energy (and wavelength) to traverse a material of unknown structure, calculating the atomic dimensions from the dif[illegible]

electron diffraction (*optics*) the creation of a lattice by the diffraction of atoms in a crystal

e·lec·tro·neg·a·tive (ilektrounegətiv) *adj* carrying a negative electric charge, and then having a tendency to become negative by gain[illegible]

electron gun a cathode and the assembly used [illegible]

electronic art art form utilizing flashing light displays

electronic banking use of magnetically encoded plastic cards at terminals outside a regular bank location for check cashing, deposits, and other money transfer functions *Cf* EFT

electronic calculator a calculator that utilizes [illegible] electronic circuit to perform arithmetic functions

electronic compositor a device for setting type electronically with characters generated by laser beams

electronic computer a device capable of performing systematic sequences of operation upon data, including numerous arithmetic and logic procedures, without intervention by a human operator during the run

electronic countermeasure (*mil*) a device designed to misdirect guidance system of an attacking missile

electronic games devices, e g , electronic tennis, that enable players to manipulate electronic impulses viewed on a display screen (usu [illegible]

e·lec·tron·i·cize (ilektronisaiz) *v* to install electronic systems

electronic larynx a device used by those without vocal cords to simulate speech through the use of an electronically controlled artificial larynx inside tube or outside the voice box

electronic lock a security device that responds to a magnetically encoded plastic card

electronic mail system of electronic transmission of postal messages between post offices, e g , Mailgram, Intelpost

electronic music musical compositions created for tape recording by electronic devices in a laboratory

electronic position indicator a device used to measure ship-to-shore distances by measuring the time elapsed for a radio echo acronym EPI

electronic profilometer a device for measuring roughness by the changing voltage in a stylus passed over a surface

electronic watch a timepiece utilizing battery-powered electronic circuits to activate a tuning fork or quartz crystal to sustain movement

electronic warfare (*mil*) military action involving the use of electromagnetic energy to determine, exploit, reduce, or prevent hostile use of the electromagnetic spectrum, and at the same time retaining its friendly use

electron lens a device for converging or diverging a beam of electrons by means of electric and/or magnetic fields It is used in the electron microscope, cathode ray tube, etc

electron microprobe (*med*) X ray device that focuses a stream of electrons on a point and measures the backscattered electrons, the resulting radiation fluorescence, etc

electron microscope a microscope of extremely high magnification and resolving power in which a beam of electrons, focused by means of an electron lens, is made to form an enlarged image of an object on a fluorescent screen or photographic plate It is used to examine the structure of bacteria, viruses, colloidal particles, etc

e·lec·tron·o·graph (ilektronəgræf) *n* a device that produces images on a photographic emulsion through the use of an accelerated beam of electrons **electronograph** *n* the image produced [illegible] **electronography** [illegible] **electronographic** [illegible] **electronography** (ilektronogrəfi) the production of photographic images using a cathode ray tube

electron synchroton a device designed to accelerate [illegible] target that will produce gamma rays

electron telescope (*optics*) a telescopic device [illegible] tive cathode that converts and enlarges the image *Cf* ELECTRON MICROSCOPE SNIPERSCOPE SNOOPERSCOPE

electron transport system (*biochem*) biological oxidizing agents arranged in a sequence of increasing strength to form compounds of oxy[illegible]

electron tube an electronic device that consists of a glass or metal container either evacuated or filled with an inert gas, that contains a cathode or filament emitting a stream of electrons, and one or more grids that regulate the stream on its path to the anode or plate Electron tubes have many uses in modern electronics, the most common being to amplify the energy of an electrical signal or to convert a direct current to an alternating current and vice versa

electron valve an electron tube

electron volt (*phys*, symbol eV) a unit of energy equal to that gained by an electron in passing through a difference in potential of one volt. 1eV = 1.6x 10^{-12} erg

e·lec·tro·ny·stag·mog·ra·phy (ilektronistægmɔgrəfi) *n* (*med*) process of recording eye movements used in assessing abnormal eye movements **electronystagmogram** *n* the record

e·lec·tro·oc·u·lo·gram (ilektrouɔkjuləgræm) *n* (*med*) record of measurement of voltage between front and back of eye, used esp in studying eyeball movement, esp in sleep *Cf* EEG

e·lec·tro·op·tics (ilektrouɔptiks) *n* the interaction between optics and electronics leading to the transformation of electrical energy into light or vice versa

e·lec·tro·phone (ilektrəfoun) *n* a musical instrument that produces electronic music

e·lec·tro·pho·re·sis (ilektroufərisis) *n* the movement of suspended particles in a fluid under the influence of an electric field The separation and identification of proteins and other colloids and the coating of objects with rubber and synthetic polymers are widely used applications (ELECTRO- + Gk *phorēsis*, being carried)

e·lec·troph·o·rus (ilektrɔfərəs) *pl* **e·lec·troph·o·ri** (ilektrɔfərai) *n* a simple device for the production of an electrostatic charge by induction (fr ELECTRO- + Gk *phoros*, carried)

e·lec·tro·phren·ic respiration (ilektrofrénik) a device that stimulates the nerve that controls breathing by electrodes placed appropriately It was designed as a means of artificial respiration and is often so used

e·lec·tro·plate (ilektrəpleit) **1.** *v t pres part* **e·lec·tro·plat·ing** *past* and *past part* **e·lec·tro·plat·ed** to plate by electrodeposition **2.** *n* something electroplated || such articles collectively

e·lec·tro·pos·i·tive (ilektroupɔzitiv) *adj* carrying a positive electric charge, tending to move toward the cathode in electrolysis || having a tendency to become positive by releasing electrons, esp in redox reactions

e·lec·tro·ret·i·nog·ra·phy (ilektroretinɔgrəfi) *n* the measurement and recording of electrical activity in the retina **electroretinograph** *n* the instrument **electroretinographic** *adj*

e·lec·tro·scope (ilektrəskoup) *n* (*phys*) an instrument which detects the presence of an electric charge by means of the motion of a charged indicator brought in the neighborhood of the unknown charge It can be used to determine whether the charge is positive or negative and to indicate the presence of ionizing radiation **e·lec·tro·scop·ic** (ilektrəskɔpik) *adj* (fr ELECTRO- + Gk *skopeein*, to observe)

e·lec·tro·shock therapy (ilektrəʃɔk) therapy using an electric current to induce coma

e·lec·tro·sleep (ilektrəsli:p) *n* sleep state induced by low-voltage electricity passed through the brain

e·lec·tro·stat·ic (ilektroustætik) *adj* relating to static electricity or to electrostatics

e·lec·tro·stat·ic copier (ilektroustætik) device for making copies of written material utilizing a charged powdered carbon toner received as an image from material oppositely charged; e g , the Xerox and Electrofax processes

electrostatic induction the development of a localized charge on a body due to the presence (without contact) of a charged object

electrostatic precipitator air-pollution control device that imparts an electrical charge to particles in a gas stream, causing them to collect on an electrode

electrostatic printer device that prints lines by projecting images onto a drum in electrostatic patterns that attract a powdered ink These in turn are transferred and fused onto the paper **electrostatic printing** *n*

e·lec·tro·stat·ics (ilektroustætiks) *n* a branch of physics dealing with the study of the forces of interaction of nonmoving electrical charges (cf.

electrostatic unit (*abbr* esu) one of a system of units based on the forces between two charged particles, e g , in the cgs system of units the fundamental electrostatic unit is the statcou[illegible]

e·lec·tro·steth·o·phone (ilektrəstethəfoun) *n* (*med*) a stethoscope equipped with microphone and amplifier

e·lec·tro·ther·a·py (ilektrōthĕr'əpē) *n.* the treatment of disorders by electricity (electric current, radiation etc.)

e·lec·tro·to·nus (ilektrŏt'nəs) *n.* the state of a nerve subjected to the passage of an electric current [Mod. L. fr. ELECTRO- + Gk. *tonos*, tension]

e·lec·tro·type (ilektrətīp) **1.** *n.* a printing plate made by coating a wax impression (e.g., of standing type with graphite and then depositing copper on it by electrolysis, the product being backed by a lead alloy | a copy made by this process **2.** *v. pres. part.* **e·lec·tro·typ·ing** *pa. t.* and *past part.* **e·lec·tro·typed** *v.t.* to reproduce from an electrotype | *v.t.* to make an electrotype **e·lec·tro·typ·er** *n.*

e·lec·tro·va·lence (ilektrōvāləns) *n.* the transfer of one or more electrons from one atom to another with the formation of ions, resulting in an ionic bond (cf. COVALENCE) || the number of charges acquired by an atom during compound or ion formation **e·lec·tro·va·lent** *adj.*

electrovalent bond a chemical bond formed by electrovalence

e·lec·trum (iléktrəm) *n.* an alloy of gold and silver (from about half to about three-quarters gold) used in ancient times [L. fr. Gk. *ēlektron*, amber]

e·lec·tu·ar·y (ilekʧuĕrē) *pl.* **e·lec·tu·ar·ies** *n.* (*old-fash.*) a medicine mixed with honey or syrup to make a sweet, soothing paste [fr. L.L. *electuarium*]

e·le·do·sin (C$_{11}$H$_{16}$N$_2$O$_3$S) (*pharm.*) protein drug, derived from salivary glands of octopuses, that causes dilation of blood vessels and reduction of blood pressure

el·ee·mos·y·nar·y (elēməsnĕrē, elēməsnərē) *adj.* relating to the giving of alms or to charitable works || supported by, or devoted to, such purposes, charitable [fr. M.L. *eleemosynarius* fr. Gk.]

el·e·gance (éligəns) *n.* the state or quality of being elegant [F. *élégance*]

el·e·gant (éligənt) *adj.* gracefully refined, neatly and beautifully made or constructed, e.g., of a mathematical proof || showing good taste, refined, polite, *elegant manners* | fashionable, smart || (*pop.*) very good of its kind [F. *élégant*]

el·e·gi·ac (elidʒáiək) **1.** *adj.* in the form or mood of an elegy, or in elegiacs || mournful, sadly remembering the past **2.** *n.* an elegiac couplet, (*pl.*) a poem in elegiac couplets **el·e·gi·a·cal** *adj.* [fr. L. *elegiacus*]

elegiac couplet a meter, used in Greek and Latin verse, in which dactylic hexameters alternate with pentameters

el·e·gist (élidʒist) *n.* a writer of elegies

el·e·gize (élidʒaiz) *pres. part.* **el·e·giz·ing** *past* and *past part.* **el·e·gized** *v.t.* to lament the death of (someone) in an elegy || *v.i.* to write an elegy

el·e·gy (élidʒi:) *pl.* **el·e·gies** *n.* a poem which laments the death of someone | a poem written in a nostalgic or melancholy mood (*Greek and Latin poetry*) a poem in elegiac meter [fr. F. *élégie* fr. L. fr. Gk]

el·e·ment (éləmənt) *n.* one of the simplest parts into which something can be divided, or a component of a composite whole || something which is present in small quantity in a larger whole, *there is an element of truth in what he said* || (*pl.*) the simplest and most basic parts of a branch of knowledge, *the elements of mathematics* | (*pl.*; *rhet.*) atmospheric forces, *to brave the elements* (to force oneself to go out into the storm) (*pl.*) earth, air, fire and water, formerly regarded as the basic constituents of the material universe (*biol.*) the natural habitat of an organism (water, dry land etc.) || (*chem.*) any of more than 100 substances that never have been separated into simpler substances by ordinary chemical means (cf. COMPOUND). Each is considered to contain atoms all of the same atomic number. All matter consists of elements, either individually or in combination. When arranged in order of increasing atomic number the elements display a characteristic periodic variation in chemical and physical properties (PERIODIC TABLE). Most elements lighter than and including [illegible] are [illegible] ones being produced [illegible] (ELEMENT) || any distinct part of a composite device, e.g., each of the individual lenses of an objective || (*elec.*) the [illegible] || any material thing or action, e.g., the water in baptism or the imposition of hands in holy orders, which [illegible]

(*pl.*) the bread and wine of the Eucharist (*the e.*) the resistance coil, wire, of an electric heater, [illegible] || (*pl.*) [illegible] to feel utterly at ease (lost, constrained), *he is in* [illegible] || (*pl.*) [illegible] (elément'l) **1.** *adj.* pertaining to the primitive forces of nature (*the e. fury*) of one of the four elements (earth, air, fire, water) | elementary **2.** *n.* a spirit identified with one of the primitive [illegible]

el·e·men·ta·ry (eləmentərē, eləmentrē) *adj.* very simple, basic, *elementary good manners* | consisting of the simplest parts of a branch of knowledge, *elementary physics* | consisting of a [illegible]

Eliot, Charles William (1926), U.S. educator, and president (1869–1909) of Harvard University. He championed the elimination of required courses and raised Harvard's entrance requirements, strongly influencing national secondary education. He edited (1909–10) the 50-volume 'Harvard Classics.'

Eliot, George (Mary Ann Evans, 1819–80), English novelist. Her earlier group of novels ('Adam Bede', 1859, 'The Mill on the Floss', 1860, and 'Silas Marner', 1861) are the most popular, but 'Middlemarch' (1872) is considered

strong sense of morality, concerning herself with problems of ethical behavior as well as the social and psychological conflicts arising from

middle class. She portrayed faithfully the life and character of the Midlands over a wide range of social levels.

Eliot, John (1604–90), New England colonial minister. He led a missionary movement to convert the Algonquian Indians to Christianity and introduce them to the English way of life. He translated (1661–3) the Bible into an Algonquian language. This was the first version in any language to be printed in America.

Eliot, Sir John (1592–1632), English statesman, one of the leaders of parliamentary opposition to Charles I.

Eliot, Thomas Stearns (1888–1965), poet and

subject in 1927. 'The Waste Land' (1922) and other early poems brought him wide recognition. During the 1920s and '30s his poetry (esp. 'Ash Wednesday', 1930), his first play ('Murder in the Cathedral', 1935) and his extremely influential criticism ('The Sacred Wood', 1920, and later volumes, together with his work as editor of 'The Criterion', 1922–39), were largely responsible for a revolution in English and American taste. He emerged as the leading writer in English of his generation. Other plays are 'The Family Reunion' (1939), 'The Cocktail Party' (1950), and 'The Confidential Clerk'

Elizabeth, St. (1207–31), daughter of Andrew II, king of Hungary. She married (1222) Louis, landgrave of Thuringia. After his early death (1227) she devoted her life to asceticism and charity. Feast: Nov. 19.

Elizabeth (1709–62), empress of Russia (1741–62), daughter of Peter I. A shrewd politician, she gained power by overthrowing Ivan VI, and brought Frederick II of Prussia near to ruin in the Seven Years' War. She was a patron of learning and French culture.

Elizabeth I (1533–1603), queen of England (1558–1603), daughter of Henry VIII and Anne Boleyn. Imprisoned in the reign of her sister Mary I, Elizabeth came to the throne (1558) to face problems of religious strife, unstable finances and war with France. With Burghley as her adviser, she tackled the economic problem, ended the war (1559), and reestablished the Church of England on the moderate basis of the Acts of Supremacy and Uniformity (1559) and the Thirty-nine Articles (1563). The queen used offers of marriage from Philip II of Spain and others to further her policy of playing off the Catholic powers of Europe against one another, while taking care to remain single. But Catholic plots at home necessitated increasingly severe measures against Catholics as well as the imprisonment (1568) of Mary queen of Scots, whom Elizabeth finally executed (1587) after the Babington plot. Mary's death led Philip II to send the Spanish Armada (1588) in a vain attempt to conquer England. The end of the reign was marked by the growth of Puritan opposition in parliament, where the questions of monopolies and of the succession to the throne caused bitter disputes with the queen. Ireland, in revolt since 1569, was pacified (1600–3), and a rising (1601) under Elizabeth's former favorite Essex was put down. The Elizabethan age saw the beginnings of social legislation in the Poor Laws of 1563 and 1601. Abroad, it was an age of maritime expansion under such adventurers as Hawkins, Raleigh, Frobisher and Drake. In literature, it was the age of Shakespeare, Sidney, Spenser and Marlowe, and there was also a flowering of music, architecture and art. Elizabeth's autocratic vanity and obstinacy were in keeping with a new mood of ebullient nationalism.

Elizabeth II (1926–), queen of the United Kingdom of Great Britain and Northern Ireland, and head of the Commonwealth, since 1952, daughter of George VI. Although her duties as a constitutional monarch are largely ceremonial she is conscientious about conducting them. She celebrated the 25th anniversary

est. The southwest and west, except for the Severn valley and the Cheshire-Lancashire plain (around Liverpool), are largely a plateau, with rolling plains and downs culminating in hills, chalk ridges and occasional moors. The Pennines, running from the N Midlands to the Scottish border, are the principal mountain chain, but the highest peaks (Sca Fell, 3,210 ft) are in the Lake District. The east is mainly an open, cultivated plain, narrowing in N Yorkshire to a passage (Vale of York) between coastal moors and the Pennines, and in Northumberland to a coastal strip. Average temperatures: (Jan.) 40°, (July) 61°. Rainfall: under 30 ins in the east and the Midlands, over 60 ins in the Lake District, Pennines, Exmoor and Dartmoor, 30–60 ins elsewhere. Ports: London, Liverpool, Hull, Manchester, Southampton, Bristol. HISTORY. The earliest known settlers in England were of Iberian stock. They were mingled (after 600 B C) with two successive invasions of Celts, who worked bronze and iron, and established a Druid priesthood. The Romans sent expeditions (55–54 B C) under Julius Caesar and invaded (43 A D) under Claudius. They made England the Roman province of Britannia, quickly conquering the south, putting down the revolt (c. 62 A D) of Boadicea, and building roads and fortified towns. The north was not subdued until the end of the 2nd c., despite the fortifications built by Agricola (c 80) and Hadrian's wall (122–8). Trade prospered and Christianity was introduced. The withdrawal (early 5th c.) of the Roman legions to defend Rome from the barbarians left England exposed to the attacks of the Picts and Scots in the north, and of Germanic invaders on the east coast. THE ANGLES, SAXONS AND JUTES drove the Celts back to Wales and Cornwall, and founded settlements (mid-5th c.) which developed into the kingdoms of Kent, Sussex, Essex, Wessex, East Anglia, Mercia and Northumbria. Christianity was reintroduced, partly by a mission from Rome under Augustine, who landed (597) in Kent, and partly by the Celtic Church centers on Iona and Holy Island. Differences between the two Churches were settled (664) at the synod of Whitby, in favor of the Roman Church. Out of sporadic fighting among the kingdoms, Northumbria emerged dominant (7th c.), and became (late 7th c.) a brilliant center of learning, with Bede and Alcuin, while a native Anglo-Saxon literature developed. Mercia rose to supremacy (8th c.), notably under Offa, who claimed to rule all England. The Danes raided the coasts (late 8th c.), landed an army (865) and began to settle. Wessex, by then the dominant English kingdom, resisted them with little success until Alfred forced the Danes to agree (878) to confine their settlement to the Danelaw in the north and east. Edward the Elder and Athelstan conquered the Danelaw (early 10th c.), and Edgar received the homage of all the kings of Britain at his coronation (973). The Danes renewed their raids (980), overcame Ethelred II, and ruled England (1016–42) under Cnut and his sons. The weak reign (1042–66) of Edward the Confessor left the throne disputed between Harold, son of Earl Godwin, and William, Duke of Normandy, who defeated Harold at Hastings (1066) and ruled (1066–87) as William I. THE NORMANS (1066–1135) added military feudalism to the social and economic organization of Anglo-Saxon England. The English Church remained subservient under William I's nominee, Lanfranc, but friction with the monarchy developed in the reign (1087–1100) of William II, and became serious when Anselm quarreled openly with Henry I. The land was surveyed in Domesday Book (1086–7), and the administrative system was centralized, notably in the reign (1100–35) of Henry I. After William I had dealt severely with English rebellions, the chief threat to the Norman monarchy lay in the risk of baronial revolt. The barons were kept in check by Henry I, whose victory at Tinchebrai (1106) secured them their estates in Normandy but anarchy broke loose on Henry's death (1135). The barons and the Church took advantage of the civil war (1139–53) between Stephen and Matilda to increase their own power. THE PLANTAGENETS (1154–1399). Royal control was reestablished in the reign (1154–89) of Henry II, despite an unsuccessful baronial rising (1174), and despite the difficulty of ruling an empire that included Normandy, Anjou, Aquitaine and Ireland. Henry failed in his attempt to control the Church by the Constitutions of Clarendon (1164), and the problem was not solved by the murder (1170) of Becket. The Crown was impoverished by Richard I's participation (1190–2) in the 3rd Crusade, his captivity in Germany (1192–4) and his war with France (1194–9). Resultant heavy taxation aroused baronial opposition, which was increased in the reign (1199–1216) of John by the loss of Normandy (1204) and his defeat by the French at Bouvines (1214). John was forced to agree to the barons' demands in Magna Carta (1215), and his successor, Henry III, was forced to agree to the Provisions of Oxford (1258). During the Barons' War (1264–6), Henry was imprisoned (1265) and briefly replaced by a council of barons under Simon de Montfort. Henry's son Edward I restored royal authority, carried out legal reforms, and conquered Wales (1277–83), but financial difficulty led to the summoning of the Model Parliament (1295). His attempt to subdue Scotland collapsed at Bannockburn (1314) under his son, Edward II, whose incompetent reign (1307–27) ended with his deposition by a baronial faction. The Hundred Years' War with France (1338–1453) was begun victoriously by Edward III, but reverses followed. The economy had prospered with the wool trade, but heavy war expenditure and the Black Death (1348–9) precipitated an economic crisis which was followed by a century of economic recession (mid-14th c.–mid-15th c.). The manorial and feudal system, long in decay, began to break up rapidly. Meanwhile, the English language was taking shape in the writings of Langland and Chaucer. Amid the social upheaval, characterized by Lollardry and the Peasants' Revolt (1381), barons acquired private armies. After a troubled reign (1377–99), Richard II was deposed by Henry, duke of Lancaster. THE HOUSE OF LANCASTER. The weakness of Henry IV's title to the throne increased the royal dependence on the barony and parliament, and most of his reign (1399–1413) was spent in putting down rebellions, notably in Wales under Glendower. Henry V diverted attention from the dynastic dispute with the house of York by his renewal of the war with France and his crushing victory at Agincourt (1415). But Henry VI lost all the English possessions in France except Calais by 1453. These reverses, and the misgovernment of England, prompted Cade's rebellion (1450) and contributed to the Wars of the Roses (1455–85). Amid sporadic warfare by baronial armies, Henry was deposed (1461) by Edward of York and, after a brief restoration (1470–1), he was murdered (1471). THE HOUSE OF YORK. Edward IV restored the royal finances, and so avoided the necessity of frequent parliaments. On his death (1483), his sons Edward V and Richard, duke of York, were imprisoned and murdered, almost certainly at the instigation of their uncle, who reigned (1483–5) as Richard III. He was overthrown and killed (1485) at Bosworth Field by a Lancastrian army under Henry Tudor, who ended the feud between Lancaster and York by marrying (1486) the daughter of Edward IV. THE TUDORS. Despite his weak title to the throne, Henry VII strengthened the monarchy, bringing the barony to order in the Court of Star Chamber and, by shrewd economic policy, building up vast financial reserves which freed him from dependence on parliament. Economic revival was aided by his avoidance of war and his encouragement of trade. This financial advantage was squandered by the flamboyant foreign policy of Henry VIII and Wolsey. The new learning of the Renaissance spread to England. Henry VIII's reign (1509–47) saw the separation of the Church of England from papal authority, prompted by the king's need to acquire the wealth of the monasteries, and by the hope that a divorce from Catherine of Aragon might enable Henry to obtain a male heir by a subsequent marriage. His only son, Edward VI, in a reign (1547–53) marked by a severe economic crisis, made the Church of England truly Protestant but, after the brief interlude of Lady Jane Grey (1553), Catholicism was restored by Mary I. The accession (1558) of Elizabeth I marked a return to moderate Protestantism, though Catholic plots continued until the execution (1587) of Mary, queen of Scots, and the defeat (1588) of the Spanish Armada. Elizabethan [illegible] economic expansion, maritime exploration, and great developments in literature, music and art [illegible]. of a vociferous Puritan opposition among the gentry in the House of Commons. THE STUARTS. The accession (1603) of James VI of Scotland as James I of England marked the personal union of the two crowns. In James's reign (1603–25), and in that of his son Charles I (1625–49), the breach widened between monarch and parliament. Against the Stuart doctrine of the divine right of kings, the Commons claimed the right to control royal policy by withholding supplies. They were angered by James's grants of monopolies, his arbitrary taxation, his pro-Spanish policy and by his worthless favorites such as Buckingham. Charles I was forced to sign (1628) the Petition of Right, but his unparliamentary rule (1629–40), through his ministers Strafford and the High Church policy of Laud, precipitated the Civil War (1642–52). After Charles's execution (1649), the Commonwealth was set up (1649), and Cromwell was appointed lord protector (1653–8). He was succeeded (1658–9) by his son. THE RESTORATION. A parliament summoned by Monk recalled (1660) Charles II from exile, on the terms of the Declaration of Breda. The Anglican Church was restored, and the civil liberties of Catholics and dissenters were restricted by the Clarendon Code (1661–5) and the Test Act (1673). After the unpopularity of Clarendon and the Cabal, and of the Dutch Wars (1665–7 and 1672–4), Charles obtained (1670) a secret subsidy from Louis XIV. Fear of a reversion to Catholicism caused the beginnings of the division between Whigs and Tories. Discontent grew in the reign (1685–8) of James II on account of his attempts to suspend anti-Catholic legislation and to make Catholic appointments. THE GLORIOUS REVOLUTION. A group of Whigs and Tories invited James's son-in-law, William of Orange, to invade and to redress grievances. James fled to France as William advanced on London (1688), and parliament declared William III and Mary II king and queen (1689). The Bill of Rights (1689) firmly established the supremacy of parliament and made Anne heir to the throne. Protestantism was reaffirmed, with toleration for nonconformist sects. There began a long period of rivalry with France, in the War of the Grand Alliance (1689–97) and the War of the Spanish Succession (1701–14). Trade prospered, and, with the establishment of the Bank of England (1694) and the national debt, London became the leading commercial and financial center of Europe. The Act of Settlement (1701) fixed the succession after Anne on the house of Hanover, and the Act of Union (1707) united England and Scotland. (For subsequent history *GREAT BRITAIN)

E·thi·o·pia (i:θi:ópi:ə) (formerly Abyssinia) a republic (area 395,000 sq. miles, pop. 31,995,000) in N.E. Africa. Capital: Addis Ababa. It includes the autonomous province of Eritrea. People: Galla (half the total), Amhara (the most influential) and Somali, with several minorities. Official languages: Amharic, English. Religion: Coptic, with a large Moslem and local religious minorities and a small Jewish one. The land is 10% arable, 47% pasture and 3% forest. The central plateau (7,000–8,000 ft) stretches from Eritrea to the Kenya border, and is crossed by mountain ranges (Ras Dashan, 15,160 ft) and cut by deep river valleys. The Sudanese slope is covered with forests and savanna. The steeper eastern slopes drop to the Danakil desert in the northeast (below sea level) and to the Ogaden desert in the southeast. South of Addis Ababa lies a chain of lakes in a depression which is part of the Great Rift Valley. Annual rainfall: northern highlands 40–60 ins, southwest highlands 60–80 ins., Somali plateau 20–30 ins, lowlands 5–10 ins. Mean temperatures (F.) highlands 65°, lowlands 87°. Livestock: sheep, cattle, horses, goats. Crops: coffee, teff, durra. Minerals: iron, marble, mica, salt. Exports: coffee (65% of exports), hides, skins. Imports: textiles, fuel oils, vehicles, machinery. Ports: Massawa, Assab. Much trade goes through Djibouti. University: Addis Ababa. Monetary unit: Ethiopian dollar (100 cents). HISTORY The kingdom of Axum flourished from the 1st to the 6th cc. Coptic Christianity was adopted in the 4th c. The rulers (from 1270) claimed descent from Solomon and the Queen of Sheba, and extended their territory. Attacked and threatened by Arabs and Turkish Moslems (16th c.) and by the Gallas, Ethiopia suffered from a period of tribal anarchy. The Portuguese made contact with the Negus in 1490, gave military help (1541) and tried unsuccessfully to spread Catholicism (17th c.). Theodore defeated the other chiefs and was crowned emperor (1855), but killed himself because of the defeat inflicted by Sir Robert Napier's British expedition (1867–8). Italy occupied Eritrea (1889) and invaded Ethiopia, but was defeated at Adua (1896) in the reign (1889–1913) of Menelik II, who consolidated the empire, introduced administrative reform, and built the new capital, Addis Ababa (1894). Tafari defeated and expelled the pro-Turkish Lij Yasu (1916) and became regent (1917), Negus (1928), and was crowned Emperor Haile Selassie (1930). Italy invaded (1935) and occupied Ethiopia (1936–41). The British liberated Ethiopia (1941) and the emperor was restored. Eritrea was federated with Ethiopia (1952) and became a province in 1962. In 1974 a military coup overthrew the emperor and a 2,000-year-old monarchy ended. By 1977 communist-backed Lt. Col. Mengistu Haile-Mariam emerged as the leader, and in 1984 the Ethiopian Communist party became Ethiopia's sole political party. Eritrean rebels continued their fight for independence, and the Somalis continued to push the Ethiopians out of the Ogaden, but the new regime had recovered most of those areas by 1981. Drought in the 1980s complicated further Ethiopia's refugee problem that drew worldwide attention as hundreds of thousands fled the north

HISTORY (see also separate countries). Caves in France and Spain show traces of occupation by Cro-Magnon man (c. 50,000–10,000 BC). Civilization in Europe developed first in the area of the Aegean Sea, notably the Minoan civilization of Crete (c. 3000–c. 1400 BC) and the Mycenean civilization of the Greek mainland (c. 1400–c. 1200 BC). Greece was invaded by Aeolians, Ionians and Dorians, and developed an empire extending along the Mediterranean, and a city-state civilization which flourished c. 500–400 BC. Greece fell (338 BC) to Philip II of Macedon, whose son, Alexander the Great, spread Hellenistic culture into Asia. The Italian peninsula was settled (c. 8th c. BC) by the Etruscans, but Rome revolted against them and founded a republic (509 BC). The Romans dominated the whole peninsula by 300 BC, drove the Carthaginians from Sicily in the 1st Punic War (264–241 BC) and overran Spain in the 2nd Punic War (218–201 BC). Rome completed the conquest of Greece (146 BC) and, by the 2nd c. AD, extended its empire around the Mediterranean, through Spain and Gaul to Britain, the Rhine, the Danube and the Balkans. Christianity became legal (313) in the Roman Empire, which split (395) into the Byzantine Empire and the West Roman Empire. The latter fell (476) to the Vandals and Visigoths, who also invaded Spain, while other Germanic tribes, the Franks and Burgundians overran Gaul, and the Angles, Saxons and Jutes conquered England (5th c.). The kingdom of the Franks expanded (6th–8th cc.), to cover what is now France, the Low Countries, Austria, Switzerland, most of Germany and part of Italy, and Charlemagne was crowned emperor of the West (800). On his death (814), his empire split up but Otto I attempted to revive it (962) as the Holy Roman Empire. Spain was conquered (8th c.) by the Moors, and remained part of Islam until the 13th c. Northern Europe was ravaged by Viking raids (8th–10th cc.) and central Europe by the Hungarians (late 9th c.). Feudalism spread throughout the continent (9th–11th cc.), and its ideals of knighthood found expression in the Crusades (1096–1270). Church and State

its height (early 13th c.) under Innocent III, but then declined (14th c.) with the growth of national monarchies. The population increased (11th–13th cc.), towns, crafts and trade revived, and Flanders and Italy became the centers of the cloth industry (13th c.). But the Black Death (mid-14th c.) ushered in a century of economic recession, during which England and France fought sporadically in the 'Hundred Years' War' (1337–1453). The Byzantine Empire fell (1453) with the capture of Constantinople by the Ottoman Turks. Classical learning revived in Europe during the Renaissance

the invention of printing by movable type (mid-15th c.). Voyages of discovery, notably by the Portuguese (late 15th c.), to India and the New World were followed by European expansion in these areas and wars over trade and colonies (16th c.). The Reformation (early 16th c.) led to religious wars in Germany (1546–54), France (1562–98) and the Low Countries (1572–1648), culminating in the Thirty Years' War (1618–48). Meanwhile, the Ottoman Empire extended through the Balkans and up the Danube. Dominance in Europe passed from Spain and Portugal (16th c.) to the Netherlands (early 17th c.) and France (late 17th c.). France was exhausted by the wars of Louis XIV's reign (1643–1715), and England emerged as the leading naval and economic power in Europe (early 18th c.). England, with a parliamentary monarchy and religious tolerance from 1689 onwards, was the center of the Industrial Revolution (mid-18th c.) and acquired a vast empire. The 18th c., the century of Enlightenment, saw the growth of Russia and Prussia under benevolent despots and the decline of the Ottoman Empire. The constitutional balance of power, previously based on the rivalry between France and the Hapsburgs, now centered on Austria, Russia and Prussia. The French Revolution (1789–99) overturned government and society in France, setting up a limited monarchy (1789–92) and then a republic (1792–9). Napoleon I, who became first consul of France (1799) and emperor (1804), led French armies across Europe in the French Revolutionary Wars (1792–1802) and the Napoleonic Wars (1803–15). By 1812 he controlled almost all of continental Europe, but his final defeat at Waterloo (1815) was followed by the restoration of the monarchies of Europe by the Congress of Vienna (1815). The forces of absolutism crushed liberal revolts in Spain and Naples (1820) but there were more serious revolutions in 1830 in France and Belgium, and in 1848 in France, Italy, Austria, Hungary and in many of the German states. By a mixture of war and diplomacy, national unity was achieved by Italy (1861) and by Germany (1871). The Hapsburg Empire, shaken by nationalist movements in the Balkans, was formed into the Dual Monarchy of Austria-Hungary (1867). Russia, one of the few countries to have made no constitutional progress in the 19th c., underwent a revolution (1905) and obtained certain reforms before the Bolshevik revolution (1917) set up a communist government. The last quarter of the 19th c. had seen the growth of heavy industry in many continental countries, which took part in a worldwide scramble for colonies to find raw materials and markets. The resultant rivalries contributed to the 1st world war (1914–18). After the defeat of Germany (1918), the war was ended by the Treaty of Versailles (1920), and Czechoslovakia, Estonia, Latvia, Lithuania, Poland and what was later called Yugoslavia all became independent. Hungary was separated from Austria. Economic recession (1929–30) brought widespread unemployment and was followed by the rise of fascist dictatorships in Italy and Germany. These countries, rearming despite the ineffectual League of Nations, intervened successfully in the Spanish Civil War (1936–9). Italy, having seized Ethiopia (1935), annexed Albania (1939), while Germany invaded Austria (1938), Czechoslovakia (1939) and Poland (1939), thereby sparking off the 2nd world war (1939–45). Germany overran successively (1939–41) Denmark, Norway, the Netherlands, Belgium, Luxembourg, France, Yugoslavia and Greece. The Germans were driven back from Russia (1943), Italy surrendered to the Allies (1943) and, after Allied landings in northern France (1944), Germany surrendered (1945). After the war, the Soviet Union dominated eastern Europe, extending its control to Albania (1945), Bulgaria and Rumania (1946), Hungary and Poland (1947), Czechoslovakia (1948), and, for a time (1945–8), to Yugoslavia. Elsewhere in Europe, economic aid was provided by the U.S.A., through the Marshall Plan (1948–51). Germany was partitioned and remained a source of disagreement between the Soviet Union and the West. Most W. European nations joined NATO (1949) and those on the other side of the Iron Curtain joined the Warsaw Pact (1955). The cultural, social and economic unity of western Europe was furthered by the formation of the Council of Europe (1949), the European Coal and Steel Community (1952) and the

European Monetary Agreement (1958) The European Economic Community and the European Atomic Energy Community (both effective since 1958) and the European Free Trade Association (1959) were formed. Cooperation in coal, iron ore and steel has been effective since 1952 and in nuclear research since 1958. A full customs union and common external tariff became effective on July 1, 1968. Overseas territories linked with the Community are associated members. The entry (Jan. 1, 1973) of Denmark, Ireland and Britain and Norway was fully negotiated (1972), but Norway's voters rejected membership (1972). Greece became a full member (1979) and Spain and Portugal joined (1986).

European Free Trade Association (*abbr.* EFTA) an organization consisting of Austria, Denmark, Norway, Portugal, Sweden, Switzerland and Great Britain, effective 1960. —The human eye is an approximately spherical ball, the muscles which move it being attached to the tough outer lining (the sclera or 'white of the eye'). The sclera is replaced in front by the transparent cornea, and has a central aperture (pupil) surrounded by a colored iris. Light travels through the cornea and then through a lens which focuses it on the inner lining of the sphere (the retina). The light falling upon the retina stimulates nerve impulses that are transmitted along sensory paths of the optic nerve to the brain. Different cells in the retina function so as to provide color vision and vision in dim light. The shape of the lens may be altered by the degree of contraction of its suspensory muscles. The amount of light entering is controlled by the size of the pupil in the center of the iris. These mechanisms allow for optimum vision of objects at varying distances and in varying degrees of brightness.
